modular endmills*

ZHUZHOU CEMENTED CARBIDE
CUTTING TOOLS CO., LTD.

Interchangeable modular endmills

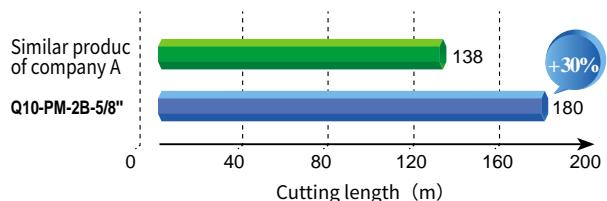

New series of interchangeable modular endmills combine the advantages of both solid carbide endmills and indexable toolholders to achieve high-precision, high-rigidity, and high-efficiency machining.

- Solid carbide cutting head with high precision and consistency;
- The self-centering screw thread ensures the quick replacement, high security and high strength;
- Double positioning from both radial and axial direction guarantees the high rigidity, high stability and high-precision coupling;
- Quick mounting on the machine tool would reduce the non-cutting time, which would significantly increase the productivity;
- Three cutting solid carbide head series can share the shanks with the indexable inserts type interchangeable series, which as a result can satisfy face milling, slot milling, shoulder milling, profile milling, ramping and plunging from roughing to finishing different working conditions.

Good rigidity, longer tool life

Workpiece material: NAK80(HRC40)
Machining methods: Profile milling
Interchangeable head: Q10-PM-2B-5/8"
Toolholder: G0.625-QCH-Q10-5.625C
Cutting method: Down milling, wet cut
Machining requirement: $R_a \leq 0.6\mu m$,
When $R_a > 0.6\mu m$ tool failure.
Machine tool: Vertical Machining Center
Cutting parameters: $V_c=800SFPM$, $f_z=0.002inch/z$,
 $a_p=0.02inch$, $a_e=0.02inch$

Result: The interchangeable modular endmills has good rigidity and anti-vibration performance. Comparing with the similar product from company A, it has longer tool life and better efficiency.

Interchangeable shank

Steel shank and carbide shank are available for long overhang, high feed rate and other working conditions.

Screw thread

The screw thread has sufficient surface contact with the curved surface with high precision, which provides outstanding precision performance and stability.

High-precision positioning surface

Assurance of the perfect combination of the shank and cutting heads

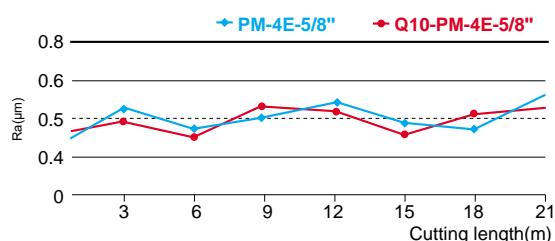

Tungsten carbide interchangeable cutting heads

Flattened endmills, Ball endmills and Radius endmills

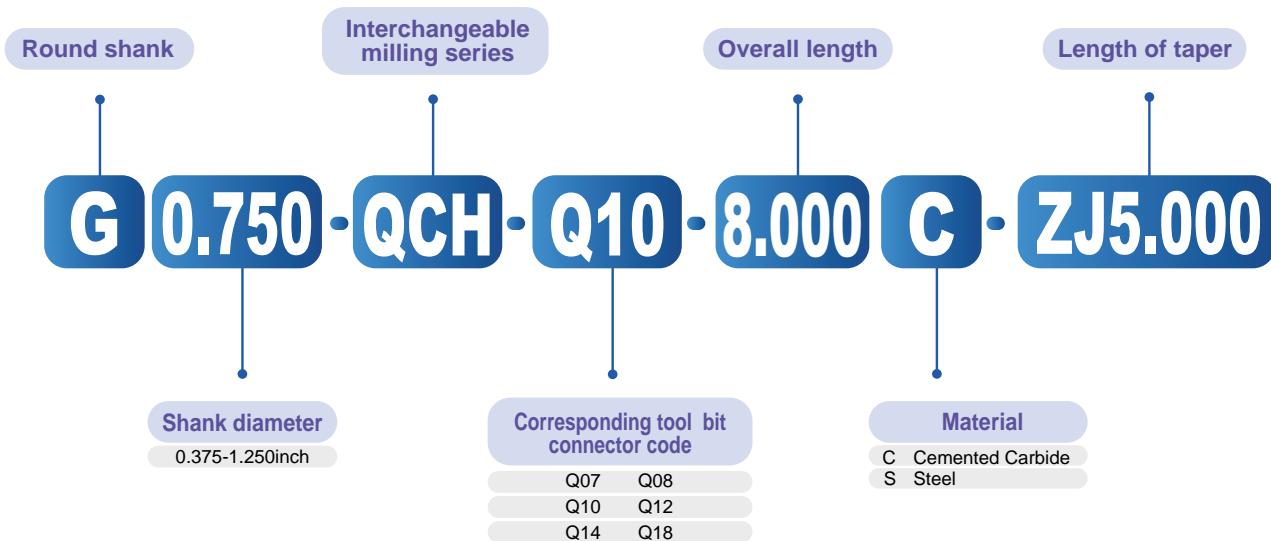

High-precision and extraordinary surface quality

Workpiece material: 718H(HRC35)
Machining methods: Side milling
Interchangeable head: Q10-PM-4E-5/8"
Toolholder: G0.625-QCH-Q10-4.375C
Cutting method: down milling and wet cut
Machine tool: Vertical Machining Center
Cutting parameters: $V_c=650\text{SFPM}$, $f_z=0.002\text{inch/z}$,
 $a_p=0.315\text{inch}$, $a_e=0.016\text{inch}$

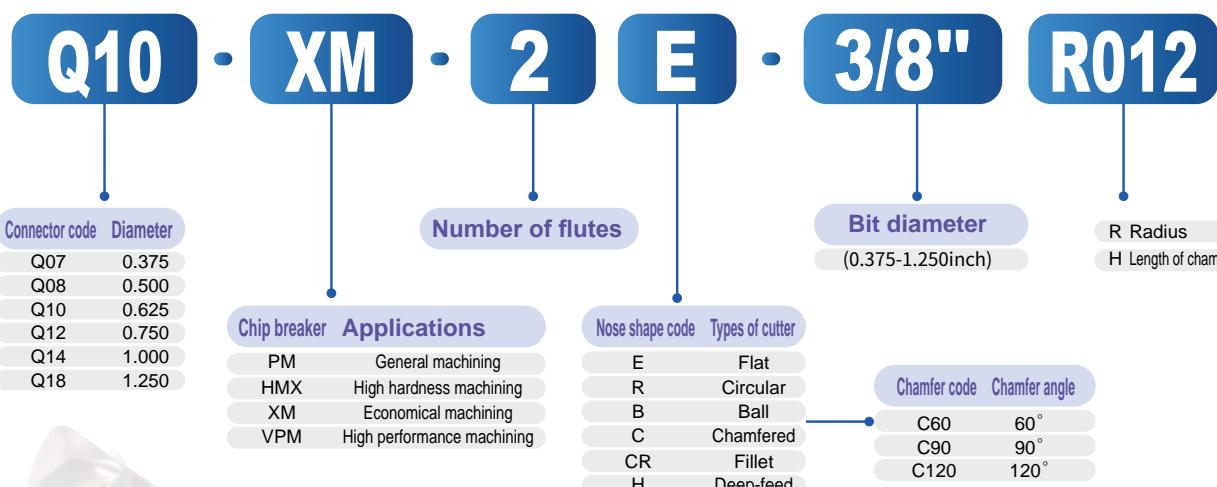

New series of interchangeable modular endmills with high precision and surface quality, which has almost the same performance as the solid carbide endmills.

Explain

1. Different ap, pitch and radius from the above table can be customized;
2. When Ap less or equal to the above dimensions will have higher cost performance.

Cutting head installation instructions

- ▲ 1. Use the clean cotton to remove the oil and dust on the interface cone, end face, and threads.
- ▲ 2. Direct hand contact with the cutting edges during clamping may cause injury. Please handle with protective equipment.
- 3. After installing the cutting head, if there is a gap between the cutting head and the end face of the shank, please use the wrench to tighten it until it fits completely.
- ▲ 4. The strict requirement is a torque should be used to install the cutting head.
